

# **1 Personal Appraisal (Joan Hau)**

## **1.1 Peer assessment statement**

### **1.1.1 Learning outcome**

My partner in this assignment is Lim Kah Yee. We are responsible to create a Gundam based on our design concept. We work together throughout the whole development process of this robot. I am in charge of creating the robot head, robot hand and shield of the robot and other features provided for the robot and background. We have excellent group work and are able to work together very well which enables us to complete this 3D model in time and able to add some advanced features for the robot.

### **1.1.2 Problem face and solution**

Throughout the whole assignment, I have learned a lot of things such as the time management which is quite important in processing the assignment. I faced some of the problems at the first stage of this assignment which is during the project plan as we need to draw the design concept of the robot, which is quite hard for me as I am very weak in drawing skills. I try to improve my drawing skills and also try to draw as similar as possible as what I design for the robot. When I face the animation problem about the robot, I always try to consult my friends and also my tutor to have a better solution about my problems. I gain a lot of knowledge through asking questions. My tutor always keeps reminding us to start drawing the robot every week during the practical class, which is really helpful for me as I will not forget to update my robot every week after the practical class and be able to apply the things that learn during the practical class into the assignment.

### **1.1.3 Future Enhancement**

After finishing this assignment, I am looking forward to improve my skills such as modelling skills, animation skills, projection skills and so on in order to create a more complicated and professional 3D model that able to attract the people in the future.
